A BROTHER'S GIFT · WILSON'S LAWN MAINTENANCE

Opening your gift

For Jeff: what this GitHub thing is, in plain words, and what it could become

Five minutes. It asks you for nothing. The same words, as a page you can read any time: OPENING-YOUR-GIFT.md in the business's home on GitHub.

If you read one slide, read this one

- **The business has been given a home on the internet, in its own name,** with its logo and its photos already in it. That place is called GitHub.
- **You owe nothing and you don't have to learn anything.** The phone, the Facebook page and the truck go on exactly as today. If this sits untouched for a year, it waits.
- **Your first ten minutes:** make an account, type your own password, send your username to Christopher. Then back to work.
- **Your password is only yours.** Nobody who is really helping you will ever ask for it, or for a code sent to your phone. Not your brother, not any helper.
- **It can grow, if you want it to.** Including the word you've been curious about. Optional, like everything here.

What GitHub is, in plain words

> Think of the folder for a big landscaping job: the estimate, the sketch of the beds, the mulch order, the day it was done, the photo at the end. Now picture that folder keeping every earlier version, never getting lost, and nobody ever writing over the estimate by accident. **GitHub is that folder, on the internet.**

	On a job	On GitHub	Means
	The job folder	**repository**	one project, every version kept
	An estimate sent for the customer's OK	**pull request**	a change, waiting for someone to say yes
	The customer signing it	**merge**	the yes; nothing goes on the ground before this
	A sketch of a new bed, beside the yard as it is	**branch**	try it without touching the real one
	A note on the job ticket	**issue**	a question or a thought, kept with the job

You don't need to know how to program to own one, or to read what's in it.

What you have been given

	What	In plain words
	WILSONSLAWNMAINTENANCE, the business's home on GitHub	the building, with your name on the door and you as an owner
	brand-assets	your logo and the photos from your Facebook page, in one place, with a page saying who may use them
	the reading room	the back office: everything written for the business, each page with a PDF beside it
	the public reading room	the front window: only what's been listed for visitors
	procedures	how each thing is done, step by step, like a checklist on the dash
	proposals	ideas offered, never asked. "Not now" is a complete answer, and so is silence
	a legal folder	a private place for paperwork, if ever wanted: empty today, and nothing in it is advice
	a second owner	a spare key held by Christopher, so the place never depends on one person, you included

What to expect

What will happen

- Once you send your username, an email from GitHub inviting you to join. It waits for you.
- AI helpers named in the history, like Alfred and Littlebird. They do the typing; a person says yes to what they prepare.

What won't happen

- No bill. GitHub's free plan is all this needs.
- Nothing leaves the back office by being written there. A page reaches the front window only after it's listed and a check has read it.
- Nobody asks for your password, a sign-in code, or your bank login. Not Christopher, not any helper.
- Nothing about customers. No names, no addresses, no prices go in here, by rule.

> Wanting anything changed is still **one message to Christopher.** You never need GitHub for that.

Your first ten minutes

	Step	You should see
	Go to `github.com/signup` and enter **your own** email address	a page asking for a password
	Type a password of your own. Nobody else types it, sees it or keeps it	a box asking for a username
	Choose a username: it's public and it lasts, so one you'd be happy to see on the side of the truck	a puzzle, or a code sent to your email
	Enter the code and choose the **Free** plan	a nearly empty page with a little patterned picture top right
	Send **only your username** to Christopher, wherever you already talk	nothing more today

That's all for today. When you have an hour, **SOP-COM-001 "New to GitHub: your first hour"** goes on from here, one step at a time: two-factor sign-in, accepting the invitation, five words, reading your room in a browser. Nothing in it asks you to type a command.

What you might be wondering

	Question	Answer
	Can I break it?	Reading can't break anything. A change waits for a sign-off, like an estimate, and a signed-off change can be taken back, which is more than you can say for mulch.
	Is it really mine?	You're an owner: you see everything and decide who else can. The second owner is a spare key, not a landlord.
	Do I need to learn to code?	No. Most of it is pages you read.
	What if it's the busy season and I ignore it?	It waits. Nothing expires because you were out mowing.
	What if the people who set this up move on?	That's why there are two owners. Everything is ordinary files you can download, and anyone you hire can read them.
	Someone is asking for my password or a code.	The answer is no, whoever they say they are. Tell Christopher.

What it could become

> **A picture of what's possible, not a plan and not advice.** Nothing here is built, nothing is needed, some of it may never arrive. Not financial, tax or legal advice; nothing here says what to buy, hold or sell. Ask a professional before anything involving money or ownership.

You've mentioned being curious about crypto. Set aside the coins and the noise: the idea under **web3** is that some records can live on a shared public ledger instead of inside one company's database, so nobody has to take one company's word for who owns what.

	What you have today	Practice for	Could grow into, if you ever want it
	Every change on record, and who made it	records you don't take on trust	a finished job with a record a later buyer of the property can check
	Your own sign-in, that only you hold	holding your own keys	a wallet for the business: a key only you hold
	Two owners, no single point of failure	shared control	two signatures before anything moves

Curious about the words? The reading room has a page for that, **The words of web3** (wallet, seed phrase, hot and cold, what never to type into a website), and beside it **Before you connect a wallet**. They explain; they don't advise.

Where to start

	You are…	Open
🎁	Jeff, today	this deck's page: **OPENING-YOUR-GIFT.md** at https://github.com/WILSONSLAWNMAINTENANCE/.github
👤+	ready for the first hour	**SOP-COM-001** in https://github.com/WILSONSLAWNMAINTENANCE/ops-standard-operating-procedures-public
🚪	signed in, with a seat	the reading room: https://github.com/WILSONSLAWNMAINTENANCE/reading-room
🤖	an AI helper	the repository's `README.md`, then **SOP-OPS-002** (helpers open pull requests; people merge)
♡	stuck anywhere	Christopher

> **What stays true however far this goes:** you decide, you keep your own keys, and "not now" is always a complete answer.
